Perum Karawang Jaya Blok A3/12A RT 38 RW 16

sult-oriented web and mobile developer with proven experience in building scalable applications and deploying them using CI/CD, Docker, and VPS infrastructure. Proficient in cloud computing (GCP, DigitalOcean), backend development, and frontend implementation. Strong analytical skills with a commitment to continuous improvement in software engineering and cloud-based systems.

Work Experiences

PT Medika Digital Nusantara - Yogyakarta, Indonesia

Jun 2025 - Aug 2025

Internship Fullstack Developer

PT Medika Digital Nusantara is a dynamic startup revolutionizing the healthcare sector through innovative digital solutions for hospitals, clinics, and doctors. During my internship, I contributed to the development and maintenance of internal systems, especially features related to patient management and doctor-patient communication.

- Developed and enhanced features in the Human Resource Management system, improving internal process efficiency.
- Adapted solutions to legacy code without disrupting the running system through in-depth code analysis before implementation.
- Handled overlooked but crucial minor tasks to maintain system stability and minimize production bugs.
- Managed tasks in real-time using Redmine, ensuring effective client communication.
- Parsed and analyzed API responses to support debugging and cross-system integration.
- Implemented professional CI/CD workflows (push to dev branch, create merge request, undergo code review) to speed up the development cycle.
- Actively collaborated with system analysts and reviewers to find technical solutions to complex issues outside the main area of expertise.

Horus Technology - Yogyakarta, Indonesia

Nov 2024 - May 2025

Internship Fullstack Programmer

- Built backend systems using Flask and SQLAlchemy ORM with PostgreSQL as the main database to ensure system performance and scalability.
- Converted designs from Figma into interactive web interfaces using Vue.js, ensuring UI matches design specifications.
- Deployed applications to Google Cloud Run with environment configuration for reliable service availability.
- Integrated CI/CD pipelines to automate deployments and speed up feature releases.
- Debugged and optimized legacy web applications, reducing response time and improving stability.
- Created technical documentation and API test reports using Apidog to support development and maintenance.
- Maintained a legacy CakePHP application to ensure stable operations according to user needs.

Metakarya - Freelance Designer, Programmer, and Cloud Engineer

Aug 2023 - Aug 2024

Malang, Indonesia

- Designed and developed a web-based Point of Sales system for small to medium-sized stores, improving transaction efficiency and data management.
- Added core features such as inventory, customer, supplier, transaction, and financial report management.
- Implemented Laravel and Bootstrap 5 for backend performance optimization and responsive UI.
- Led a small 3-person team from design to deployment, ensuring timely project delivery.
- Performed regular maintenance and adjustments based on user feedback to maintain satisfaction and usability.
- Deployed to an Ubuntu VPS, including subdomain setup, SSL installation, and manual backups for data security.

Muslimat NU - Yogyakarta, Indonesia

Jan 2024 - Jan 2025

Project-Based Programmer & Cloud Engineer

- Built an admin system using Laravel for centralized database and organizational management.
- Developed a WordPress-based organizational website to display the management structure and activity documentation.
- Trained ±15 non-technical users on WordPress to improve content management independence.
- Customized sites using plugins such as Elementor, ACF, and Code Snippets to meet specific needs.
- Deployed via aaPanel on VPS, including domain, SSL, and Nginx server configuration for optimal availability.

Education Level

Universitas Islam Negeri Sunan Kalijaga Yogyakarta - Yogyakarta, Indonesia

Jul 2021 - Aug 2025

Bachelor of Informatics, 3.68/4.00

- Member of Google Developer Student Club programming group.
- Received the Karawang Cerdas Scholarship for three consecutive years for academic achievement (GPA ≥ 3.00/4.00).
- Developed several personal web and mobile projects to apply course materials and learn emerging technologies.

- Designed and built CropOptima, a Kotlin-based mobile app recommending optimal crops based on location and weather parameters.
- Developed and hosted the backend API on Ubuntu VPS using Nginx and aaPanel.
- Implemented a Machine Learning model (validation accuracy $\pm 95\%$) for crop recommendations.
- Collaborated in a 6-person team, completing development in just 1 month following Agile and SDLC principles.
- Project selected as Top 50 National Capstone Project in Bangkit Program 2023.

- Designed hardware systems using ESP32-WROOM, ESP32-CAM, solar panels, and speakers for automatic bird detection and deterrence.
- Developed microcontroller software in C++ with MQTT, HTTP, and Wi-Fi protocols for reliable data communication.
- Integrated the system with YOLO-based AI, achieving $\pm 95\%$ accuracy in real-time bird detection.
- Managed IoT device data via a Streamlit dashboard for monitoring and automated notifications.
- Project selected as Top 20 National Project in Samsung Innovation Campus 2025.

Organisational Experience

- Participated in programming-related activities and discussions on trending technology topics.

Skills, Achievements & Other Experience

- **Achievements & Certifications:** Top 20 Samsung Innovation Campus 2025, Top 50 Bangkit Capstone Project 2023, Bangkit Graduate 2023, Oracle Java Fundamental Certificate, Oracle Java Programming Certificate
- **Web Development:** Laravel, Bootstrap, HTML, JavaScript, PHP Native, Vue.js, Python (Proficient); Django, Express, React (Familiar)
- **Cloud Computing:** Nginx deployment, VPS, Control Panels, Docker, Linux CLI, Bash, Google Cloud Platform, DigitalOcean
- **Mobile Development:** Kotlin, Figma, XML-based UI
- **Machine Learning:** YOLO, Unsloth, HuggingFace, Large Language Models (LLM)
